

Solar company!

what if ...

... there could be a new future
for green energy?

BISOL Group is a European manufacturer of premium photovoltaic modules and provides a full range of photovoltaic solutions. We are running international operations from offices in Slovenia, Belgium, France, Italy and the United Kingdom. Our vision is to create a greener environment and future energy independence by continuously investing in technology, developing visionary products and increasing returns from photovoltaic investments. We are making green energy more cost-effective compared to conventional energy sources worldwide.

Throughout history, enthusiastic people have brought the most profound change. Inspiring ideas come from those with brilliance and the devotion to believe anything is possible. At BISOL Group, the world's leading experts are raising industry standards and inventing creative solutions. Because we design products that offer the strongest lifetime energy yields, green energy has become more attractive than ever before.

We live in a world borrowed from our children.

This is why we take our responsibility to the environment and the community around us very seriously. From the conception of a new product, all the way to its everyday use, we consider our carbon footprint. From our solar power plants, we every year generate 20-times the amount of electricity that we use for the production of BISOL PV modules.

As a member of various organisations which recycle all our modules, we are sure that the raw materials from our products can start a new life in a sustainable world for future generations. Our mounting solutions for solar power plants are also manufactured with recyclable materials to further reduce our impact on the environment.

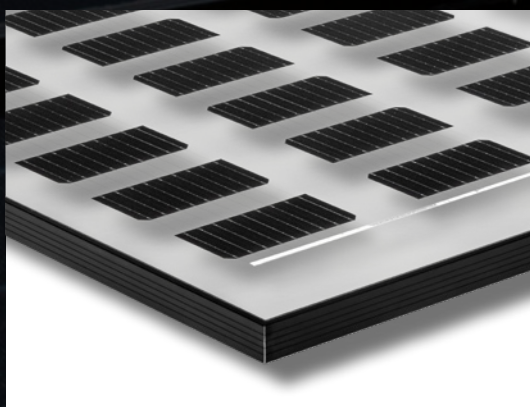

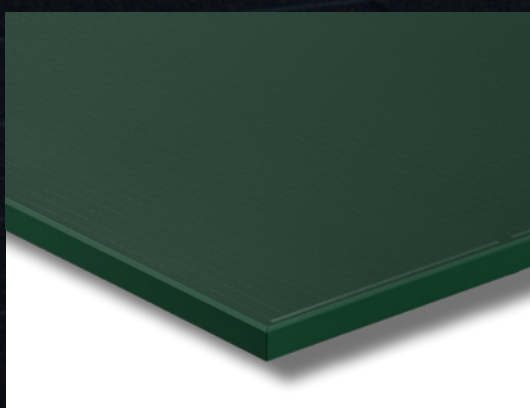

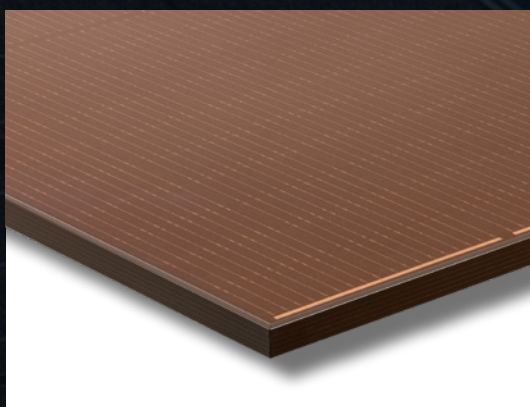

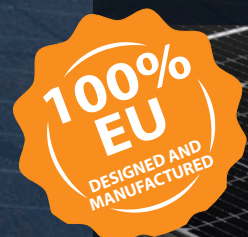

what if ...

... technology and environment
could go hand in hand?

We keep our production process within the European Union because we passionately believe this ensures supreme quality control reflected in our premium products and helps us promote sustainability. Toxic materials and industrial waste are an environmental burden to future generations, so we eliminate the use of toxins and handle waste responsibly.

We carefully select suppliers to provide components and materials that are pre-certified and rigorously tested. By only using the highest quality, you benefit from reliable solar products that last much longer.

We perform quality control at every step of the production process in order to ensure the flawless performance and highest energy yield throughout the PV module's lifetime. We operate in accordance with international standards ISO 9001 (Quality management systems), ISO 14001 (Environmental management systems), and ISO 45001 (Occupational health and safety management systems).

what if ...

... a PV module
could do so much more?

Our in-house research and development team works closely with world-renowned research centres to introduce innovative technology and powerful products.

BISOL crystalline photovoltaic modules are recognised globally for their premium quality, excellent performance and aesthetic design. The high-power modules come with an extended product guarantee, a 25-year linear guarantee on power output and positive power output tolerances. Several independent laboratory tests have proven that our modules have extremely low degradation rates, are very robust, and have an especially long lifespan. According to real-life PV plant monitoring, BISOL PV modules are one of the world's best-performing products. They are manufactured from the highest quality materials; last longer, and increase your lifetime energy yield. This allows for greater return on investment, more savings and increased profitability.

We combine performance with an elegant design which integrates perfectly into your home. BISOL full-black modules and building integrated solutions are notable for the way they combine form and function. Our Spectrum modules with coloured glass were specifically designed for installations where colour conformity to the building design is of paramount importance. Translucent Lumina modules with selective cell matrices allow better transmittance of natural light and are ideal for winter gardens, greenhouses, and carports. Whether a domestic or commercial solar installation, Duplex modules drive profitability by lowering the cost of labour and mounting material, while Bifacial modules boost the power plant's power to extremes.

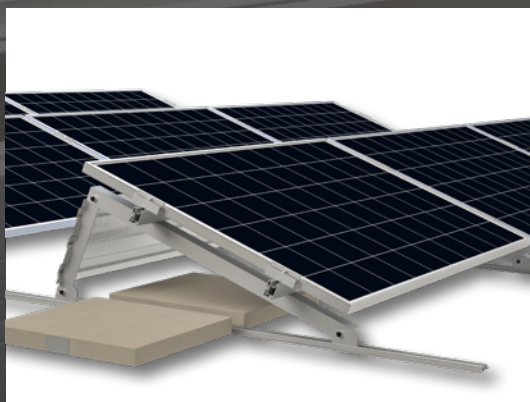

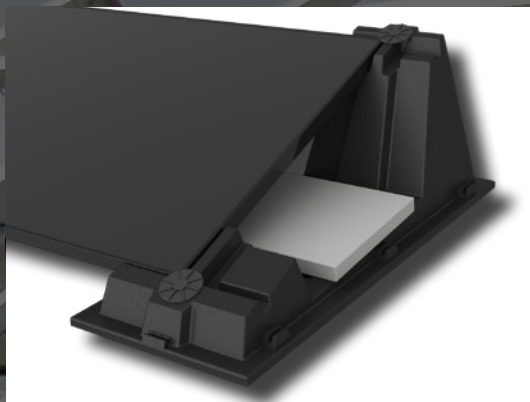

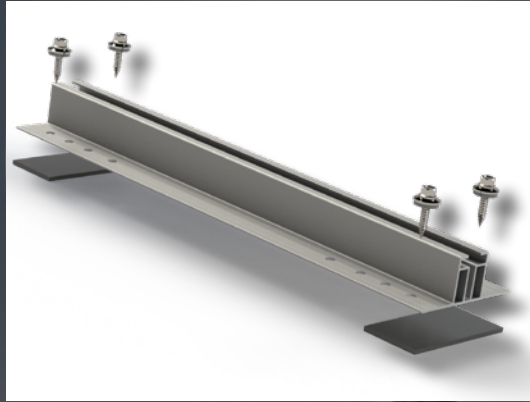

We are especially proud of the luxury module series setting trends in the solar industry. BISOL Supreme™ is the only series of PV modules in the world that guarantees 25 years of 100% output power. The unique solar product with zero degradation transforms the understanding of top-notch quality, and sets new milestones in the field of performance and reliability.

what if ...

... one brand
met all your solar needs?

We have everything you need to produce solar energy: from premium quality PV modules, industry-leading mounting solutions, to project design support and PV plant performance monitoring. We provide a comprehensive range of products and services; therefore you only need one company for all your solar energy requirements!

We design our own industry-leading mounting solutions suitable for any type of roof or ground-mounted PV installation. BISOL mounting solutions can be easily installed and provide long-term performance which saves you time and increases the profitability of your investment. We offer a wide selection of aluminium structures together with profiles, hooks, hanger bolts, clamps, and brackets, UV-resistant HDPE solutions and other accessories. Our mounting solutions come with up to 15-year guarantee, and present a reliable solution suited for various wind zones and applications.

what if ...

... you always came first?

Keeping our customers satisfied is the driving force behind our business. That is why our team develops green energy solutions tailored to your specific needs. From our offices located in different countries, we provide fast and reliable support.

Quality is more than just a word.

We use the best materials to give you cutting-edge products, ensuring you always get the most from your green energy investment. Additionally, our highly trained aftersales support team is always on hand to offer you an unsurpassed service.
