

KlickTop

The modular connector by Schletter

- Economically priced, quick and safe
- Mounting from above
- No additional tools required
- Can be used with all standard rails

KlickTop is a universal new fastening component that can be used for the most different kinds of application on pitched roofs.

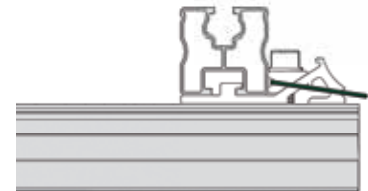

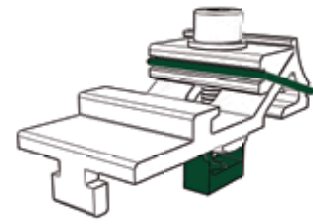

- Cross rail connector
- Fastening on roof hooks
- Fastening to trapezoidal sheet metal clamps Fix2000
- Fastening to corrugated roof kit
- Many other combination options on request

KlickTop can be fastened to all rails with Schletter-Klick groove. Due to the central fastening with only one screw, quick mounting can be taken for granted! Moreover, the flow of forces is structurally optimized by the new hook-in and clamp technique, so that the profiles cannot be twisted by unsymmetrical loads.

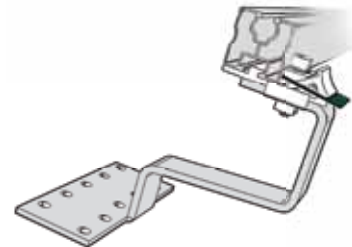

KlickTop can be combined with most fastening components from the Schletter unit assembly system. For this purpose, special designs are available as well as suitable attachment pieces for numerous combinations. Further information can be looked up in our component overview.

Application example: KlickTop as a cross connector (GridNorm)

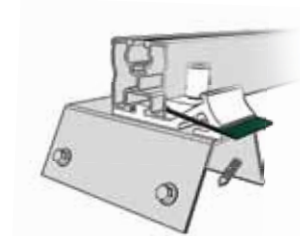

Rail cross connector KlickTop with screw, Klick and square nut
129004-000 für Klick groove M8
129004-001 für Klick groove M10

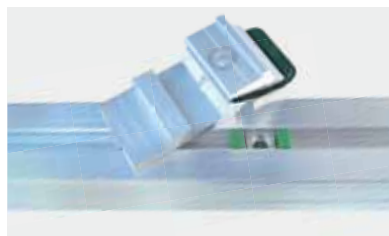

Cross rail

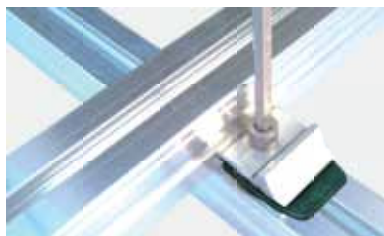

Roof hook KlickTop

Fix2000 KlickTop

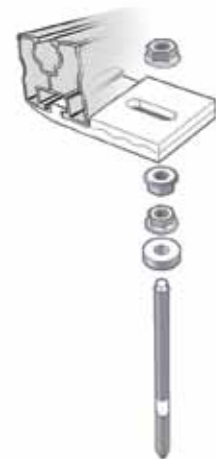

1 Hook in the cross connector in the lower profile

2 Quick and convenient screwing from above

Please consider that there is a special design of the KlickTop connector in case you need a rail cross connector. An additional hook on the front side optimizes the load transmission by providing a perfect positive locking between the lower and the upper rail.

The Schletter auto-calculator allows a convenient compiling of suitable components.
