
TECHNICAL BULLETIN LV54 Battery

Please note, the CAN cable currently shipped with the Fox ESS LV54 battery is made-up at one end only (the battey end).

The installer will need to make up the cable at the inverter end, ensuring they check the LAN wiring of the compatible inverter. In the case of the Solis Hybrid inverter, the cable config should be as follows:

Battery	Inverter
PIN 4	PIN 5
PIN 5	PIN 4
