

Product Update: SolarEdge Power Optimizer S500B, with bent bracket.

Dear SolarEdge customers,

SolarEdge is pleased to provide an update to recently introduced S500B S-Series Power Optimizer. The S500B is designed for enhanced energy production, advanced design capabilities, and feature “Sense Connect,” our patented technology for arc risk prevention and a higher level of site safety.

The SolarEdge Power Optimizer S500B was introduced with a standard flat mounting bracket. S500B with this bracket enables has an effective depth of 45mm. The new S500B PN with the bent bracket will enable to reduce this effective depth to 33mm, which would improve the Power Optimizer installation clearance between the Optimizer and any object it is mounted on.

What this means for you:

- SolarEdge Power Optimizer S500B with standard flat mounting bracket End of Sale is effective immediately, all open orders will transition to bent bracket version.
- The price is not changing, no need to send revised POs.
